

Sheldon Mendonca

Software Engineer — Full Stack (React, Spring Boot)

Bengaluru / Hyderabad, India

+91-9008748840 | sheldonmendoncawork123@gmail.com | Portfolio | LinkedIn

SUMMARY

Software Engineer with 2+ years building production systems at scale - led MVP delivery, architected core platform features and mentored junior engineers. Background in high-stakes engineering (aerospace structures) brings systems thinking and ownership mentality to complex backend and full-stack problems.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, C++, SQL

Frontend: React, Next.js, HTML5, CSS3, Redux, Responsive Design

Backend: Node.js, Express.js, Spring Boot, RESTful APIs

Databases: MongoDB, PostgreSQL, MySQL

Tools & Practices: Git, GitHub, CI/CD, Docker, Jest, Jira, Google Analytics, Google Tag Manager, AWS (Amplify, S3, EC2)

EXPERIENCE

Software Development Engineer

May 2024 – Apr 2026

HireHunch / JusRecruit

Bengaluru, India

- **Led end-to-end delivery of JusRecruit MVP in 3 months** as the primary frontend owner - built ATS workflows, phone-screening features and a Next.js marketing site that onboarded the first wave of students and customers
- **Architected and shipped 10+ large production features** including a white-labeling system and real-time streaming modules in React and TypeScript, directly expanding the product's enterprise customer base
- **Reduced customer support tickets by 35%** and **improved system uptime to 99%** by diagnosing and resolving **25+ critical production bugs** across the stack
- Owned observability and deployment infrastructure - **instrumented 20+ user events via Google Analytics and GTM** and managed CI/CD pipelines on AWS (Amplify, EC2, S3), **cutting deployment time by 60%**
- Mentored 3 junior developers through structured code reviews and pair programming, reducing edge-case defects by 40%

Senior Stress Engineer

Jul 2018 – Oct 2022

Taal Tech India Pvt. Ltd.

Bengaluru, India

- **Owned full project lifecycles** for 5+ high-stakes structural engineering projects, coordinating cross-functional teams, stakeholders and clients under strict deadline and quality constraints
- **Mentored junior engineers**, improving team productivity by 25% through technical guidance, knowledge sharing and design reviews
- Developed internal automation tooling and scripting that sparked a transition into software engineering, leading to a career focused on systems, tools and scalable problem-solving

PROJECTS

FlowPay – Distributed Fintech System (In Progress)

May 2026 – Present

Personal Project

Go, Kafka, PostgreSQL, Redis, Docker

- Designed and built a **microservices-based payment platform** using Go, Kafka, PostgreSQL and Redis, implementing event-driven workflows for payments, wallet management, ledger accounting and offers
- Implemented **idempotent APIs, transactional outbox pattern, replay-safe consumers and failure recovery mechanisms** to ensure correctness under retries, duplicate events and partial system failures
- Built a **double-entry ledger architecture** with asynchronous payment orchestration, maintaining financial consistency while supporting eventual consistency across distributed services
- Developed production-style observability using **Prometheus, structured logging and distributed tracing**, alongside concurrency-safe offer reservation and redemption workflows

EDUCATION

Manipal Institute of Technology

Jul 2014 – May 2018

B.Tech in Mechanical Engineering

CGPA: 8.54 / 10
